### Project Design Complete; Construction to Begin

The Maryland Department of Transportation State Highway Administration (MDOT SHA) is working on a project to replace the bridge on MD 273 (Telegraph Road) over Big Elk Creek in Fair Hill, Cecil County. As a part of MDOT SHA's Bridge System Preservation program, which provides reliable bridges in a timely manner, the existing bridge is nearing its useful life and needs to be replaced. The project design is complete, and construction on the new bridge will begin this Fall/Winter 2018 and last until Summer 2020. Additional work that would occur as a part of this project includes the construction of stormwater management facilities east of the project site at Marlyn Drive near the MD 316 Appleton Road Intersection. There will also be trail reconstruction under the MD 273 bridge, road widening, and guardrail replacement. MDOT SHA will make every effort to complete this project as quickly as possible while minimizing impacts on area residents, businesses, motorists, and Fair Hill NRMA.

### How does this project affect Fair Hill NRMA?

The bridge on MD 273 is adjacent to the Fair Hill Natural Resources Management Area (NRMA), a state park owned by the Maryland Department of Natural Resources (DNR). MDOT SHA has coordinated with DNR and Park representatives regarding the project scope and the impacts on Fair Hill NRMA.

The MD 273 bridge over Big Elk Creek spans two existing park trails. These trails will be reconstructed by MDOT SHA and will require a 30-day trail closure to complete the work. The closure will be scheduled during a period of minimal trail use, and a temporary shelter will be provided to shield trail users from construction activities when passing under the bridge.

Occasional, short-duration trail closures may also be necessary throughout the bridge project. Trail closure and detour information will be posted in Fair Hill parking lots and conveyed via state websites and social media. Detour signs will also be placed throughout the trail as necessary. Access to Big Elk Creek within the designated project area will be closed to fishing for the duration of the project. For the safety of all visitors, fishing from the temporary trail shelter will not be permitted. Please contact the Fair Hill NRMA office for information on alternate fishing areas.

**SPECIAL NOTE TO HORSE RIDERS & CARRIAGES:** Various bridge construction activities including pile driving/drilling, excavation, demolition, sawing, welding, etc. will take place above the trails throughout this project. These activities may be visible or audible when approaching the work area and when passing under the temporary trail shelter. Horses may become distracted, startled, or anxious. **KNOW YOUR HORSE(S) AND YOUR LIMITATIONS BEFORE APPROACHING THIS AREA.** Plan ahead and choose alternate trail routes if necessary.

### How will local traffic be impacted during construction?

During construction, traffic will be maintained on MD 273 (Telegraph Road) by allowing for two-way traffic in one reversible lane controlled by a system of traffic signals. Signal timing will be monitored and adjusted as needed based on traffic conditions. This method of maintaining traffic has been used successfully on many other MDOT SHA projects; however, be advised that wide loads may not fit through the work zone when this traffic pattern is in use.

### For More Information

**MD 273 Bridge Project** - For additional information related to the MD 273 project and trail closures please contact:

**Mr. Robert Rager, Community Liaison**
